OWNER PRIVILEGES

- Contract owner can't mint tokens after initial contract deploy
- Contract owner can't exclude an address from transactions
- Contract owner can burn a predefined amount of tokens from a predefined address

```
function burn(uint256 amount) public override onlyOwner whenNotPaused {
    if (!isBurnable()) {
        revert BurningNotEnabled();
    }
    super.burn(amount);
}

function burnFrom(address from, uint256 amount)
    public
    override
    onlyOwner
    whenNotPaused
{
    if (!isBurnable()) {
        revert BurningNotEnabled();
    }
    super.burnFrom(from, amount);
}
```

- Contract owner can renounce ownership

```
function renounceOwnership() public override onlyOwner whenNotPaused {
    super.renounceOwnership();
}

function renounceOwnership() public virtual onlyOwner {
    _transferOwnership(address(0));
}

function transferOwnership(address newOwner) public virtual onlyOwner {
    require(newOwner != address(0), "Ownable: new owner is the zero address");
    _transferOwnership(newOwner);
}
```

● Contract owner can transfer ownership

```
function transferOwnership(address newOwner)
    public
    override
    onlyOwner
    whenNotPaused
{
    super.transferOwnership(newOwner);
}
```

Recommendation:

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. The risk can be prevented by temporarily locking the contract or renouncing ownership.

CONCLUSION AND ANALYSIS

Smart Contracts within the scope were manually reviewed and analyzed with static tools.

Audit report overview contains all found security vulnerabilities and other issues in the reviewed code.

Found no HIGH issues during the first review.

TECHNICAL DISCLAIMER

Smart contracts are deployed and executed on the blockchain platform. The platform, its programming language, and other software related to the smart contract can have its vulnerabilities that can lead to hacks. The audit can't guarantee the explicit security of the audited project / smart contract.
