

SMART CONTRACT CODE REVIEW AND SECURITY ANALYSIS REPORT

Cybertruck
\$TRUCK

23/11/2023

TOKEN OVERVIEW

Fees

- Buy fees: 0%
- Sell fees: 0%

Fees privileges

- Can change buy fees up to 25% and sell fees up to 25%

Ownership

- Owned

Minting

- No mint function

Max Tx Amount / Max Wallet Amount

- Can't change max tx amount and / or max wallet amount

Blacklist

- Blacklist function not detected

Other privileges

- Can exclude / include from fees
 - Contract owner has to call enableTrading function to enable trade
-

FreshCoins Team will take no payment for manipulating the results of this audit.

The score and the result will stay on this project page information on our website <https://freshcoins.io>

FreshCoins Team does not guarantees that a project will not sell off team supply, or any other scam strategy (RUG or Honeypot etc)

INTRODUCTION

FreshCoins (Consultant) was contracted by **Cybertruck** (Customer) to conduct a Smart Contract Code Review and Security Analysis.

0x9D1d202a5bCD9A7e618a5fC1f2BD7Ec7BaBCd50b

Network: **Binance Smart Chain (BSC)**

This report presents the findings of the security assessment of Customer's smart contract and its code review conducted on **23/11/2023**

AUDIT OVERVIEW

Security Score

Static Scan

Automatic scanning for common vulnerabilities

ERC Scan

Automatic checks for ERC's conformance

High

Medium

Low

Optimizations

Informational

No.	Issue description	Checking Status
1	Compiler Errors / Warnings	Passed
2	Reentrancy and Cross-function	Passed
3	Front running	Passed
4	Timestamp dependence	Passed
5	Integer Overflow and Underflow	Passed
6	Reverted DoS	Passed
7	DoS with block gas limit	Low
8	Methods execution permissions	Passed
9	Exchange rate impact	Passed
10	Malicious Event	Passed
11	Scoping and Declarations	Passed
12	Uninitialized storage pointers	Passed
13	Design Logic	Passed
14	Safe Zeppelin module	Passed

OWNER PRIVILEGES

- **Contract owner can't mint tokens after initial contract deploy**
- **Contract owner can't exclude an address from transactions**
- **Contract owner can exclude/include wallet from tax**

```
function excludeFromFees(address account, bool excluded) public onlyOwner {
    _isExcludedFromFees[account] = excluded;
    emit ExcludeFromFees(account, excluded);
}
```

- **Contract owner has to call `enableTrading` function to enable trade**

Please note that any wallet excluded from fees retains the ability to engage in trading, even in situations where trading has been disabled

```
function enableTrading() external onlyOwner {
    require(!tradingActive, "Cannot reenable or disable trading");
    tradingActive = true;
    swapEnabled = true;
    emit EnabledTrading();
}

_transferFrom function line 431
.
.
.
if(!tradingActive){
    require(!_isExcludedFromFees[from] || !_isExcludedFromFees[to], "Trading is not active.");
}
.
.
.
```

- **Contract owner can change swap settings**

```
function updateSwapTokensAtAmount(uint256 newAmount) external onlyOwner {
    require(newAmount >= totalSupply() * 1 / 100000, "Swap amount cannot be lower than 0.001% total supply.");
    require(newAmount <= totalSupply() * 1 / 1000, "Swap amount cannot be higher than 0.1% total supply.");
    swapTokensAtAmount = newAmount;
}
```

● Contract owner can change buy fees up to 25% and sell fees up to 25%

```
function updateTax(uint256 buyTax, uint256 sellTax) public onlyOwner {
    require( buyTax >= 0,"invalid amount");
    require( sellTax >= 0,"invalid amount");
    require( buyTax <= 25,"max tax 25");
    require( sellTax <= 25,"max tax 25");
    buyOperationsFee = buyTax;
    buyTotalFees = buyOperationsFee;

    sellOperationsFee = sellTax;
    sellTotalFees = sellOperationsFee;
}
```

● Contract owner has ability to retrieve any token held by the contract

```
function withdrawStuckETH() external onlyOwner {
    bool success;
    (success,) = address(msg.sender).call{value: address(this).balance}("");
}
```

● Contract owner can renounce ownership

```
function renounceOwnership() external virtual onlyOwner {
    emit OwnershipTransferred(_owner, address(0));
    _owner = address(0);
}
```

● Contract owner can transfer ownership

```
function transferOwnership(address newOwner) public virtual onlyOwner {
    require(newOwner != address(0), "Ownable: new owner is the zero address");
    emit OwnershipTransferred(_owner, newOwner);
    _owner = newOwner;
}
```

Recommendation:

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. The risk can be prevented by temporarily locking the contract or renouncing ownership.

CONCLUSION AND ANALYSIS

Smart Contracts within the scope were manually reviewed and analyzed with static tools.

Audit report overview contains all found security vulnerabilities and other issues in the reviewed code.

Found 1 HIGH issues during the first review.

Rank	Address	Quantity (Token)	Percentage
1	0xEf3F2e...6B27BF1b	6,899,999,985.735	100.0000%
2	0x1e7Cf8...d092687C	14.265	0.0000%

TECHNICAL DISCLAIMER

Smart contracts are deployed and executed on the blockchain platform. The platform, its programming language, and other software related to the smart contract can have its vulnerabilities that can lead to hacks. The audit can't guarantee the explicit security of the audited project / smart contract.
