# OWNER PRIVILEGES

- **Contract owner can't mint tokens after initial contract deploy**
- **Contract owner can't exclude an address from transactions**
- **Contract owner can exclude/include wallet from tax**

```
function excludeFromFees(address account) external onlyOwner {  
    _isExcludedFromFees[account] = true;  
}  
  
function includeInFees(address account) external onlyOwner {  
    _isExcludedFromFees[account] = false;  
}
```

- **Contract owner can exclude/include wallet from rewards**

```
function includeInRewards(address account) external onlyOwner {  
    _isExcludedFromRewards[account] = false;  
}  
  
function excludeFromRewards(address account) external onlyOwner {  
    _isExcludedFromRewards[account] = true;  
}
```

- **Contract owner can change `_feeProcessor` address**

Current value:

`_feeProcessor` : `0xc90c795303d54db4ac5f4ec8f53c3fef0ad023b6`

```
function setFeeProcessor(address newFeeProcessor) external onlyOwner {  
    _feeProcessor = newFeeProcessor;  
}
```

### **Recommendation:**

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. The risk can be prevented by temporarily locking the contract or renouncing ownership.

# CONCLUSION AND ANALYSIS

Smart Contracts within the scope were manually reviewed and analyzed with static tools.

Audit report overview contains all found security vulnerabilities and other issues in the reviewed code.

Found no HIGH issues during the first review.

# TECHNICAL DISCLAIMER

Smart contracts are deployed and executed on the blockchain platform. The platform, its programming language, and other software related to the smart contract can have its vulnerabilities that can lead to hacks. The audit can't guarantee the explicit security of the audited project / smart contract.
