

SMART CONTRACT CODE REVIEW AND SECURITY ANALYSIS REPORT

BABYETF

Baby ETF

\$BabyETF

03/01/2024

TOKEN OVERVIEW

Fees

- Buy fees: 5%
- Sell fees: 5%

Fees privileges

- Can't change fees

Ownership

- Owned

Minting

- No mint function

Max Tx Amount / Max Wallet Amount

- Can't change max tx amount and / or max wallet amount

Blacklist

- Blacklist function not detected

Other privileges

- Can exclude / include from fees
 - Contract owner has to call enableTrading function to enable trade
-

DISCLAIMER

The information provided on this analysis document is only for general information and should not be used as a reason to invest.

FreshCoins Team will take no payment for manipulating the results of this audit.

The score and the result will stay on this project page information on our website <https://freshcoins.io>

FreshCoins Team does not guarantees that a project will not sell off team supply, or any other scam strategy (RUG or Honeypot etc)

INTRODUCTION

FreshCoins (Consultant) was contracted by **Baby ETF** (Customer) to conduct a Smart Contract Code Review and Security Analysis.

0x660E27a1B3Cf62b40E6C54be492eEf845c397DcB

Network: **Binance Smart Chain (BSC)**

This report presents the findings of the security assessment of Customer's smart contract and its code review conducted on **03/01/2024**

AUDIT OVERVIEW

Security Score

Static Scan

Automatic scanning for common vulnerabilities

ERC Scan

Automatic checks for ERC's conformance

High

Medium

Low

Optimizations

Informational

No.	Issue description	Checking Status
1	Compiler Errors / Warnings	Passed
2	Reentrancy and Cross-function	Passed
3	Front running	Passed
4	Timestamp dependence	Passed
5	Integer Overflow and Underflow	Passed
6	Reverted DoS	Passed
7	DoS with block gas limit	Low
8	Methods execution permissions	Passed
9	Exchange rate impact	Passed
10	Malicious Event	Passed
11	Scoping and Declarations	Passed
12	Uninitialized storage pointers	Passed
13	Design Logic	Passed
14	Safe Zeppelin module	Passed

OWNER PRIVILEGES

- Contract owner can't mint tokens after initial contract deploy
- Contract owner can't exclude an address from transactions
- Contract owner can exclude/include wallet from tax

```
function excludeFromFees(address account, bool excluded) external onlyOwner{
    _isExcludedFromFees[account] = excluded;

    emit ExcludeFromFees(account, excluded);
}
```

- Contract owner can change swap settings (with threshold)

```
function setSwapTokensAtAmount(uint256 newAmount, bool _swapEnabled) external onlyOwner{
    require(newAmount > totalSupply() / 1_000_000, "BEP20: SwapTokensAtAmount must be greater than 0.0001% of total supply");
    swapTokensAtAmount = newAmount;
    swapEnabled = _swapEnabled;

    emit SwapTokensAtAmountUpdated(swapTokensAtAmount);
}
```

- Contract owner has to call **enableTrading** function to enable trade

Please note that any wallet excluded from fees retains the ability to engage in trading, even in situations where trading has been disabled

```
function enableTrading() external onlyOwner{
    require(!tradingEnabled, "BEP20: Trading already enabled.");
    tradingEnabled = true;
    swapEnabled = true;

    emit TradingEnabled(tradingEnabled);
}

_transferFrom function line 358
.
.
.
require(tradingEnabled || _isExcludedFromFees[from] || _isExcludedFromFees[to], "BEP20: Trading not yet enabled!");
.
.
.
```

● Contract owner can change **feeReceiver** address

Current value:

feeReceiver: 0x99E74609984bC34FE4Aa64E2048a2F16351b606C

```
function changeFeeReceiver(address _feeReceiver) external onlyOwner{
    require(_feeReceiver != address(0), "CSLT: Fee receiver cannot be the zero address");
    feeReceiver = _feeReceiver;

    emit FeeReceiverChanged(feeReceiver);
}
```

● Contract owner has ability to retrieve any token held by the contract

Native tokens excluded

```
function claimStuckTokens(address token) external onlyOwner {
    require(token != address(this), "BEP20: Owner cannot claim contract's balance of its own tokens");
    if (token == address(0x0)) {
        payable(msg.sender).sendValue(address(this).balance);
        return;
    }

    IERC20(token).transfer(msg.sender, IERC20(token).balanceOf(address(this)));
}
```

● Contract owner can transfer ownership

```
function transferOwnership(address newOwner) public virtual onlyOwner {
    require(newOwner != address(0), "Ownable: new owner is the zero address");
    emit OwnershipTransferred(_owner, newOwner);
    _owner = newOwner;
}
```

● Contract owner can renounce ownership

```
function renounceOwnership() public virtual onlyOwner {
    emit OwnershipTransferred(_owner, address(0));
    _owner = address(0);
}
```

Recommendation:

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. The risk can be prevented by temporarily locking the contract or renouncing ownership.

CONCLUSION AND ANALYSIS

Smart Contracts within the scope were manually reviewed and analyzed with static tools.

Audit report overview contains all found security vulnerabilities and other issues in the reviewed code.

Found 1 HIGH issues during the first review.

3	Null: 0x000...dEaD	92,366,000,056.1	9.2366%

TECHNICAL DISCLAIMER

Smart contracts are deployed and executed on the blockchain platform. The platform, its programming language, and other software related to the smart contract can have its vulnerabilities that can lead to hacks. The audit can't guarantee the explicit security of the audited project / smart contract.
